

Wall Bed Mechanisms

Not your grandma's Murphey bed!

Selby wall bed hardware is designed and manufactured to be safe and reliable. The working parts that power the counter balance mechanism are safely enclosed in a 12 gauge steel sleeve. Reports of Selby wall beds in service for nearly 30 years are common. All components and parts of our Pardo system are designed and produced in Europe, exclusively for their designated purpose.

Selby's wall bed mechanisms retain their ability to counter the heavy weight of a wall bed platform for life, and the tension can be adjusted for changes in construction materials, replacement mattresses, or seasonal bedding. Platform elevator screws allow for perfect alignment and leveling of platform doors and door reveals.
